

How to Save a PDF to an iPhone

1. On your iPhone, open the PDF you want to save within a tab in **Safari**. Alternatively, this could also be a webpage you want to access offline or send to someone who cannot access the live version.

2. Click the Share button at the bottom of the screen
3. Once the menu appears, you will see several options from iOS on what to do with the file, including sending in an email or text message. You will also see options for where you store your PDF, including in the iPhone's native **Files app** or in another app you have installed. To save your document, press **Save to Files**

4. Pressing this will open your available folders in **iCloud Drive**. You can choose one to save your PDF or create a new folder by pressing three dots in the top right corner.
